Track Your Utility Performance With HSC's Utility Management Program!

Tracking your utility data is the first step to controlling your utility costs. But collecting and interpreting utility data takes time and expertise that many housing providers don't have. HSC's Utility Management Program (UMP) can help!

UMP is an online energy monitoring platform, built on EnergyCAP software, that helps you measure your utility performance so you can manage your consumption and save money.

UMP Features Include:

Utility Performance Tracking

Track your building's utility performance across time periods and parameters that you choose

Quick Snapshots & Detailed Views

Log-in from any location or device for quick summaries and detailed views, plus receive quarterly email reports

Expert Analysis & Support

HSC's staff provide expert analysis and support to help interpret data and help to spot savings

Data Management

HSC collects and inputs your utility data, freeing up valuable time

How UMP Works

- HSC collects and inputs your utility data into our online system.

- HSC accounts for differences in weather from year-to-year to enable apples-to-apples comparisons of your utility performance across multiple years.

- Users log-in to view natural gas, electricity, and water data in dashboard summaries and detailed views that show progress, compare buildings, and highlight poor performers.

- Users review and share data such as quarterly email reports or dashboard view with fellow staff to inform energy project decisions.

## What does the new UMP Look Like?

UMP combines an attractive online platform with detailed quarterly email reports and one-on-one support to help housing providers understand how energy and water are being used over time, down to the meter level, and on a sector-wide basis.

Sample Dashboard

The online dashboard shows a quick overview of portfolio level performance trends

"PowerViews" show attractive graphs and details on specific buildings and meters, helping users see their progress

Start measuring, managing, and saving energy today!
